Francis Rittell here for dedication proceeding  
— I met him rather accidentally through  
Mel Cohn & found he was succeeding Bill  
Consolazio at NSF in Molecular Biology.  
Also found he was interested in microbiology  
and felt this should be better represented  
in NSF program - but he wasn't yet very  
well informed. NSF still hasn't worked out  
its orientation to NASA. But people like him  
may help. Rittell should come back here  
for Westex-4 on the 26<sup>th</sup>.
